variset benches, hooks, hangers & shelves for changing rooms & cloakrooms

CI/SfB 947 (76) x

**Attention to detail is what makes Binns equipment superior. We pride ourselves on taking extra care to provide the best possible solution. Binns present a bespoke system based on standard components, giving a competitively priced product which is flexible and adaptable.**

### **Binns the company**

AJ Binns Limited was founded in 1937, when John Binns set up business in Great Marlborough Street in Central London. As the demand for Binns products grew, the company was divided into two sections to accommodate the specialist knowledge required for the diversity of its product range. AJ Binns Limited catered for the growth in the sports and leisure industry. Binns Fencing Limited grew to become a market leader in high security fencing systems. When Julian Binns joined the company in 1970, having trained as an industrial designer, he commissioned Kenneth Grange to design a new range of products based on good looks, high quality materials and the flexibility to suit a wide range of applications.

The range was given the name Variset® and won a Design Council Award in 1972. From the original Multiple hook system, the range has developed to include many more products, with design quality always the top priority. In 1997 the company moved to its present location in Potters Bar. Since then, the Reverse hook system, Coin operated cable-lock and, most recently, the Elliptical range have been introduced.

**A CD containing the full specification of all variset products is attached on the inside back cover**

variset benches, hooks, hangers & shelves for changing rooms & cloakrooms

**Solid white oak**

**Upholstered Connolly leather**

**Powder coated to any RAL colour**

variset **elliptical**

Elliptical is the next generation of changing room equipment ideal for sports and leisure changing areas, reception areas and also outdoor applications. It is built to the same demanding standard specifiers expect from all Binns products.

**code EL7A** cantilever wall fixed bench

single width, island or wall bench with reverse hooks. height 1770 depth 505mm

**code EL5**  
double width island bench height 435 depth 560mm

**code EL7**  
wall and floor fixed bench height 435 depth 425mm

**code EL7A**  
cantilever wall fixed bench height 435 depth 425mm

**code EL9**  
single width wall or island bench height 435 depth 366mm

**code ELP**  
wall fixed perch height to suit client requirements depth 210mm

**code ELP** wall fixed perch

**code EL5** with upholstered Connolly leather slats

**Composition and manufacture**

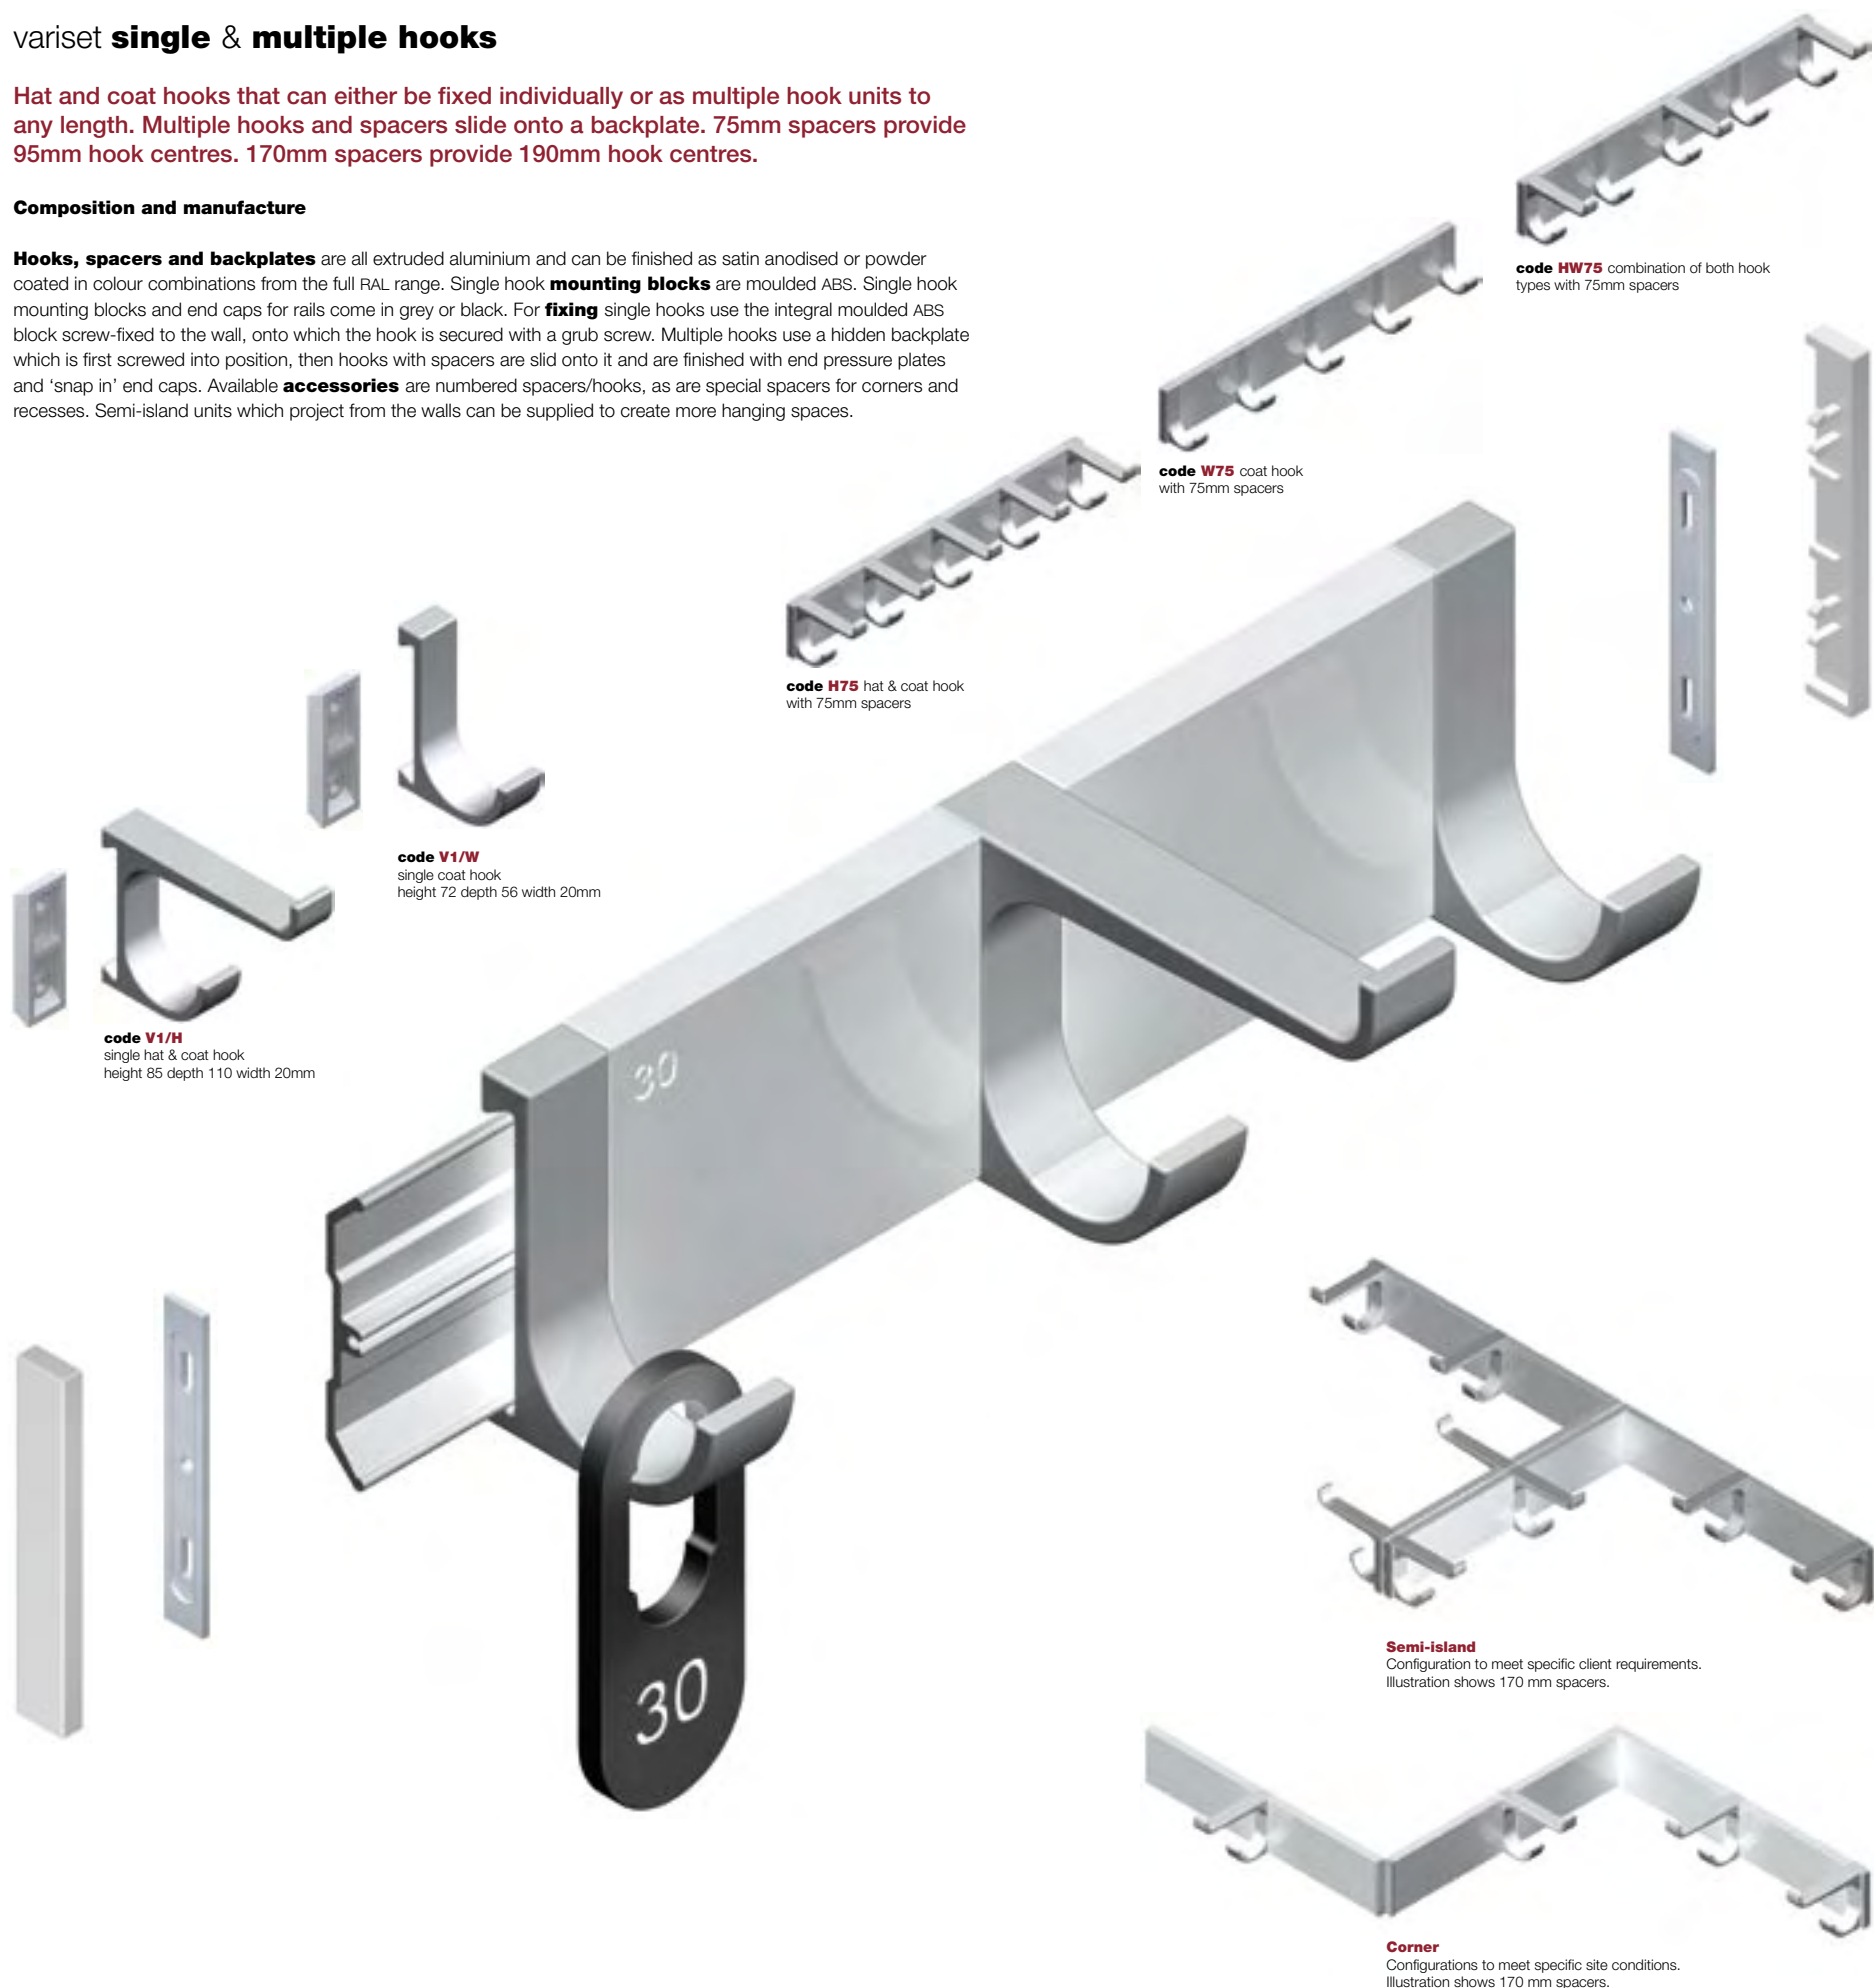

There are seven products within this range. The seating frames are laser cut and hand finished in 8mm, high quality mild steel or stainless 316. The slats are extruded aluminium and can be powder coated in any RAL colour or upholstered in Connolly leather. Alternatively, they can be specified with hardwood slats.

## variset **single & multiple hooks**

Hat and coat hooks that can either be fixed individually or as multiple hook units to any length. Multiple hooks and spacers slide onto a backplate. 75mm spacers provide 95mm hook centres. 170mm spacers provide 190mm hook centres.

### Composition and manufacture

**Hooks, spacers and backplates** are all extruded aluminium and can be finished as satin anodised or powder coated in colour combinations from the full RAL range. Single hook **mounting blocks** are moulded ABS. Single hook mounting blocks and end caps for rails come in grey or black. For **fixing** single hooks use the integral moulded ABS block screw-fixed to the wall, onto which the hook is secured with a grub screw. Multiple hooks use a hidden backplate which is first screwed into position, then hooks with spacers are slid onto it and are finished with end pressure plates and 'snap in' end caps. Available **accessories** are numbered spacers/hooks, as are special spacers for corners and recesses. Semi-island units which project from the walls can be supplied to create more hanging spaces.

# binns

variset benches, hooks, hangers & shelves for changing rooms & cloakrooms

**code PH** acrylic hanger available in a range of colours

## variset **reverse hooks**

Inspired by client comments and the German standard Din7917 for coat hooks, the reverse hooks were designed to sit behind a protective shield to avoid problems associated with projecting hooks in highly trafficked areas.

### **Composition and manufacture**

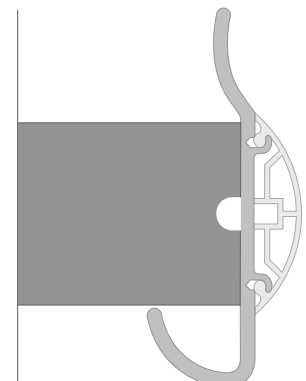

**Reverse hooks** are made from extruded aluminium and are fixed by a M8 x 12 socket head bolt.

**Wall brackets** are mild steel and are fixed to an extruded aluminium front cover. These brackets have integral 8.5 x 20mm fixing slots. Intermediate brackets can be fixed as required. Moulded **end caps** finish the exposed ends of the front cover rail. The **finish** of all elements is powder coated in colour combinations from the full RAL range.

**Wall fixings** are to be supplied by installer to suit site conditions. On **installation** hooks are usually centred at 95mm or 190mm but can be supplied at any centre required. Units are available in any length and can be used with our **vz** or **Elliptical** range.

**Reverse hook assembly**  
height 145 depth 114mm

**VZ12 installation**  
Wall unit with a single row of captive  
hangers and shelf unit with wall to floor  
fixing supports.

## variset **VZ**

Designed to provide a high performance range of benches, hooks, hangers and shelving equipment for changing rooms and cloakrooms. Independently tested for strength, stability and durability so it will stand the test of time in the toughest environments. Units can be manufactured to any dimensions to suit client requirements.

**code VZ2A** single sided island bench unit with a shoetray

**code VZ6** single width island bench with 5 slats and shoetray  
**code VZ7A** cantilever wall bench with aluminium slats

**code VZ7A** cantilever wall bench with aluminium slats where timber is unsuitable

**code VZ7A** cantilever wall bench

# binns

variset benches, hooks, hangers & shelves for changing rooms & cloakrooms

Installation shows VZ2 and VZ2A island units fixed into VZ8 wall/floor fixed units with H170 hook rails above.

All drawings shown refer to our standard Variset range, however all products can be specified to meet any requirement, for example, three slat seating can easily be increased to four or five to meet Sport England or DDA regulations.

## Strength & durability

Samples of the VZ range have been tested and passed by FIRA (Furniture Industry Research Association) for strength and durability. These tests involve simulating heavy usage in operating conditions. Both impact testing and continuous loading tests are performed to check both the initial strength and the continuing durability of the frames.

## Flexibility

The standard Binns range can be supplied as required to provide special seat and hook heights for children, or deeper seat spans to suit the disabled.

## Steel frames

The steel frames of the Variset range are manufactured from heavy-duty ERW flat oval sections. The tubes used are approximately 30% thicker than most other changing room equipment manufacturers'.

## Mitre joints

The white beech seating slats can be mitred in the corner which provides an extremely neat, continuous appearance that removes possible dirt and finger traps.

## Leg positioning

Unlike many modular systems the positioning of legs is carefully considered. This improves the appearance of the product, eliminating unsightly details, such as extra legs, which can cause dirt and litter traps.

## Low-level tie rails

When shoetrays are not present low-level tie rails are used to ensure island bench units remain rigid and stable. This removes the possibility of 'racking', even on longer lengths.

## variset VZ

All Variset benching systems can be manufactured to standard sizes or to any height and length for no additional cost. The result is a complete bespoke system that is no more expensive than a standardised option. Binns will also design and manufacture units to meet any special requirements not available from the standard ranges.

### Composition and manufacture

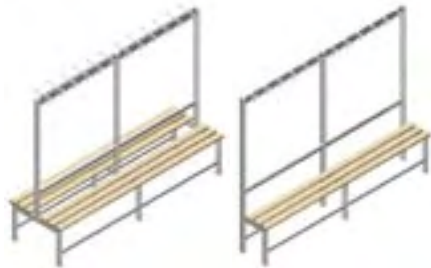

The **framework** is made from hollow section heavy gauge steel tube and is a fully welded assembly.

**Seats and shelves** are produced from sustainable European white beech slats 32 x 75mm and finished with a clear acid-catalysed lacquer. **Aluminium seating slats** are available for the toughest of environments or where a high level of humidity is present. **Shoetrays** are made from heavy duty angle frame and 3mm wire mesh. The **finish** of the range is powder coated in colour combinations from the full RAL range. Timber slats are trimmed on site to the exact length to fit the desired space. There is an extensive range of **accessories** to complement the **VZ** range. These include a security locking system and hanger numbering options. On **installation** seat and shelf corner slats are mitred on site and steel plates are supplied to support the mitred joints. If shoetrays are required they stop at the seat supports nearest the corners.

### Hanger & claimer numbering

**VZ** steel rod captive and non-captive hangers can have claimers for retrieval of garments in an operated cloakroom.

Heavy duty acrylic claimers have numbers engraved into them. Numbered tags are rivetted to the steel hangers and paint filled in a contrasting colour.

**code VZ1**

# binns

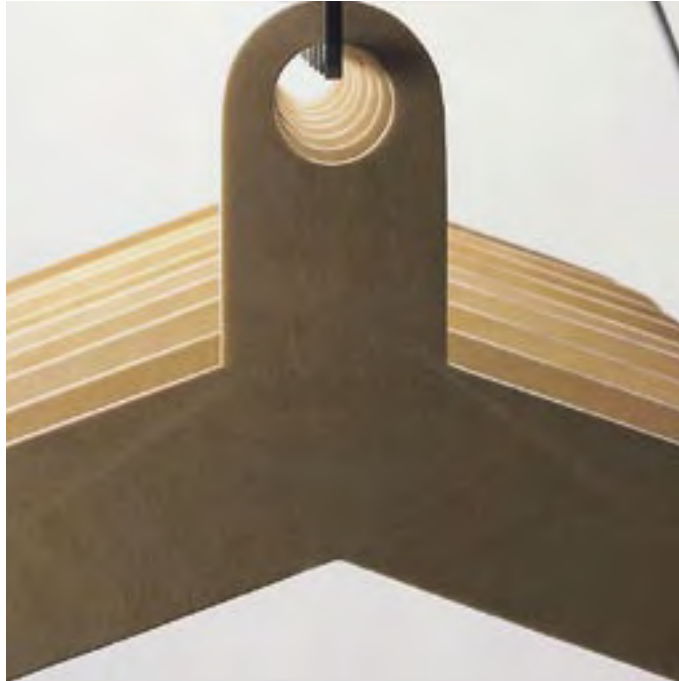

variset benches, hooks, hangers & shelves for changing rooms & cloakrooms

Binns variset NV  
Installation: Cadogan Hall, Sloane Terrace, London SW1  
Home of the Royal Philharmonic Orchestra

# variset **NV**

## Composition and manufacture

**Hangers and hooks** slide into aluminium rails which can also form a slatted shelf. The **NV** hangers are held by nylon straps which cannot be removed from the rails. The straps give flexibility, making it easy to place coats and other garments on them. Single or multiple grey or black nylon hooks can slot into the aluminium rails along with **NV** hangers. A new range of ply hangers **WH** and acrylic hangers **PH** are now available. The cup hook **C** is a new addition to the Binns range of hooks. This was developed for the American market to enable heavy objects such as satchels to be suspended where a standard nylon hook would not suffice. **Rails** are extruded aluminium.

**Wall brackets** are produced from mild steel. The **finish** of the brackets and rails is powder coated in colour combinations from the full RAL range. On **installation** wall brackets hold the rails with captive nuts, which slide in the top of the rails. Centres for fixing the wall brackets are not pre-determined and can be varied to suit site requirements. We recommend wall brackets to be fixed at not more than 1000mm centres.

## Hanger & claimer numbering

**NV** hangers can have claimers for the retrieval of garments in an operated cloakroom. Heavy duty acrylic claimers have numbers engraved into them which correspond to the nylon hanger straps.

**code FSA NV3D**  
double sided island with shelf, hooks & hangers

wall fixed hook rail with **NV** nylon hooks

## Binns accessories

Binns Variset can offer a wide range of accessories as part of their cloak and changing room systems. These can either be supplied separately, or to complement a Binns cloakroom installation.

**code coin-return lock** security system.

**code locker range** Binns are able to offer a huge choice of locker options by working closely with experienced trade only manufacturers in the UK and Europe. Each manufacturer is a specialist in its own field covering the whole range of specification levels that most projects will need.

**code hat and coat stand VHS** The hat and coat stand consists of six aluminium hat and coat hooks fitted to a central aluminium column with an umbrella retaining ring and a drip tray built into the black ABS base cover. The heavy mild steel base ensures excellent stability. The product can be finished powder coated in colour combinations from the full RAL range, or satin anodised.

## **Binns** and a 35 year relationship with it's designer

The association with Binns began in 1970, starting with the design of the Variset single and multiple hook units, which won a Design Council Award in 1972. Since then, Kenneth Grange has been continuously involved in the Company's development and the design of new products.

**Kenneth Grange CBE, RDI**

His commercially successful designs have become so ubiquitous that they form the backdrop to our daily lives, yet we hardly notice them. The redesigned London Taxi, the Inter-City 125 train, the Kenwood Chef, the Kodak Instamatic camera, the Wilkinson Sword Protector razor, the Parker 65 pen and the new Anglepoise lamp are just a few.
